
MIE1517 Progress Report

Introduction

The progress report is a check-in to show that you have made progress toward the completion of the project. By the project progress due date, your team should have:

- Obtained all or most of the data
- Come up with a reasonable model
- Produced at least one promising result
- Provide a convincing argument for the feasibility of completing the project within the time remaining

Expectation

The expectation is that you submit a concise .html file with your best result up to this point. **You do not have to create a separate report or write anything extra.** Please provide an organized, easy to read, Jupyter notebook showing a step-by-step guide for achieving your best results to date, along with brief note summarizing your result and how much more you still need to do to complete the project. You will be assessed on the clarity and readability of your submission. Make sure what you submit is easy to read, organized by section headings, and minimize unnecessary outputs. We don't need to see all your training outputs.

The progress report will be assessed with a **score out of 30** based on the above points and the clarity of your Jupyter Notebook.

How to Submit

Submit your project progress report as a group on <https://q.utoronto.ca> by the due date. Any work that is submitted up to 24 hours past the deadline will receive a 20% grade deduction. No other late work will be accepted. Quercus submission time will be used. You can submit your work as many times as you want before the deadline.

Rubric

The grade breakdown for the progress report is outlined in the table below.

Component	Score	Weight
Data Collected	10pt	1%
Result Achieved	10pt	1%
Organization and Conciseness	10pt	1%
