

How the team worked?

The project includes 4 parts: team formation and topic selection, data collection and coding script, presentation preparation, and final report completion. For all the parts, our team formed a Teams group chat and discuss together to determine the scope before development. We also created a Google Drive to share all relative files in the progress, including Google Colab notebooks, recorded videos for presentation, presentation slides, and documents for all submission, so that everyone is on the same page. For those parts need multiple members to work together, we will update in the Teams group chat when we finish our own parts. For example, in the coding part, one of the members is responsible for model building part, while another member is responsible for hyperparameter training, so when first member completed the model part, he will share the notebook in our shared Google Drive and the second member will continue it with training code.

Team Contribution

Jessika Noenchen	Jacob Trombley	The Minh Nguyen	Alice Zhang
28%	32%	22%	16%

My Tasks

1. Gathered the group members as a team
2. Preparing the presentation speech – 30%
3. Complete the discussion and analysis parts in the final report
4. Complement the comments for the notebook for coding clarification
